As a web developer, I've accumulated three years of experience focusing on front-end development, during which I've cultivated a strong interest in crafting user-friendly interfaces that elevate the overall user experience.

My skillset extends beyond technical abilities, as I possess a firm grasp of SEO and accessibility best practices. I've applied various tactics to boost website performance and search engine rankings while also developing web applications that adhere to WCAG 2.1 standards.

Having worked with an array of front-end technologies, including HTML, (S)CSS, JavaScript, Vue, and AngularJS, I've had the privilege of creating responsive and user-friendly web applications for companies such as Red Bull, Swissquote, Salewa, BMW, and Vodafone. This has enabled me to refine my proficiency in these areas. Furthermore, I'm acquainted with several CSS frameworks, including Bootstrap, Ant, and Material Design (both Vue and Angular).

I pride myself on being a fast learner who can adapt to new technologies and collaborate effectively within a team setting. I'm also adept at communicating technical concepts clearly and concisely to various stakeholders, regardless of their technical backgrounds.

I am enthusiastic about the prospect of joining a new company and contributing to the success of the team. Thank you for taking the time to review my application, and I eagerly await the opportunity to discuss my qualifications further.
